

ProSix

Connect
with ProSix.

Fore to hind, from the most distal tendon in the hind to the brain and all parts in between, ProSix is the neuromuscular connection that brings back "the signal", returning **strength, proprioception, and balance**. ProSix is made of knitted, ventilated elastic that provides support and gentle resistance to the horse's own movements. The tension in the elastic creates an external stimuli on stretch receptors in the muscles to provide information to the neurons and the brain, and that brings the injured or non-communicating area back "online".

Ines Wecker | Veterinarian and Chiropractor

Director of the Backbone-Academy, Buxtehude, Germany

“

I am a vet of over 25 years and an animal chiropractor of over 15 years. I must say, ProSix is outstanding for sensory as well as motor neuromuscular rehabilitation. Without ProSix, some of my tough patients wouldn't have made it.

But that shouldn't imply that it is only useful for last hope cases—the opposite. In the best of all worlds, we and our horses would work in perfect balance all the time. As we're all far from that, our horses actually do gain so much from the ProSix. Get in contact with ProSix and see for yourself!
